

Liberal/Conservative Radar Detection Monitor Released by OmniPreSense

Know which way your friends lean without a political discussion!

San Jose, CA April 1, 2024 – OmniPreSense Corporation, an innovative supplier of radar sensors, announced the OPS900 liberal/conservative (LIBCON) detection monitor. The AI driven radar monitor can tell if a person is a liberal or conservative, saving you from uncomfortable political discussions, ugly looks, and needless arguments.

The OPS9000 uses OmniPreSense’s proprietary radar signal processing and AI to accurately report if a person is a liberal, blue light, or conservative, red light. The radar scans and detects nanoparticles in a person’s cells and thru an AI based large body model (LBM) discerns the differences in their orientation (leaning left or right). Future enhancements will discern their spin for bullshit detection utilizing a proprietary LLM (Large Liar Model)

With the OPS9000 LIBCON monitor, you can step into a bar, scan the room, and know instantly who to talk to and who to avoid. You can discreetly scan that blind date for guidance on what subjects you can discuss and what to avoid. Or at a business meeting, know what jokes you can crack and what’s taboo.

OmniPreSense is working to expand the LIBCON ecosystem by integrating it with the latest high-tech products. A direction connection into the Apple Vision Pro will allow blue/red highlighting of individuals in real time. An API extension for Facebook will allow tagging your connections as liberal or conservative and make available a new game, “Where’s the Conservative?”. Work is also proceeding on extensions to Elon Musk’s Neuralink technology for direct feedback into your brain.

“We continue to innovate on our core radar technology and are pleased to provide products that can make our world safer,” stated Alfred P. Neuman, Chairman of OmniPreSense. “Just think of a world you can view through red and blue tinted glasses. We’re excited to put this power in everyone’s hands, especially during this contentious election year.”

Pricing and Availability

The OPS9000 LIBCON monitor is available for pre-order and priced at \$999. It will ship when it’s released to production. It can be ordered from the company website at www.omnipresense.com.
